Express VoIP

Highlights

- VoIP enables most KSU/PBX systems
- Remote office long-distance savings
- Low-cost IP functionality
- Dial internal extensions between remote sites
- Maximizes existing data connection value
- Web-based administration

Integration

- Express VoIP integrates with all Vodavi phone systems.

Express VoIP installs in minutes giving any phone system an instant VoIP upgrade without the cost of a new system. Remote offices can easily be reached while avoiding long-distance charges using the existing IP connection. Express VoIP is an economical solution without sacrificing functionality.

Express Connectivity

This non-proprietary adjunct gateway connects to an available analog CO port on an existing telephony system to provide Voice-over-IP connectivity to other VoIP enabled devices. An analog phone can also be connected directly to the Express VoIP gateway giving a remote site or home office simple VoIP connectivity right to the main office. This allows telecommuters to avoid the hassle of adding up all business related long distance charges by accessing the main office's telephone system to place outbound long distance calls instead.

Express Installation

The Express VoIP installs easily connecting directly to available analog CO ports to provide VoIP capability on any phone system.

Express Administration

All administration is easily performed through a web browser. Remote configuration changes are quick and simple.

G.723.1 now supported!
